Multigrid Methods For Process Simulation Computational Microelectronics:

Multigrid Methods for Process Simulation Wolfgang Joppich, Slobodan Mijalkovic, 1993-08-20 It was about 1985 when both of the authors started their work using multigrid methods for process simulation problems This happened in dependent from each other with a completely different background and different intentions in mind At this time some important monographs appeared or have been in preparation There are the three classical ones from our point of view the so called 1984 Guide 12J by Brandt the Multi Grid Methods and Applications 49J by Hackbusch and the so called Fundamentals 132J by Stiiben and Trottenberg Stiiben and Trottenberg in 132J state a delayed acceptance resent ments with respect to multigrid algorithms They complain Nevertheless even today s situation is still unsatisfactory in several respects If this is true for the development of standard methods it applies all the more to the area of really difficult complex applications In spite of all the above mentioned publications and without ignoring important theoretical and practical improvements of multigrid this situa tion has not yet changed dramatically This statement is made under the condition that a numerical principle like multigrid is accepted if there exist professional programs for research and production purposes Professional in this context stands for solving complex technical prob lems in an industrial environment by a large community of users Such a use demands not only for fast solution methods but also requires a high robustness with respect to the physical parameters of the problem

Simulation of Semiconductor Devices and Processes Siegfried Selberherr, Hannes Stippel, Ernst Strasser, 2012-12-06 The Fifth International Conference on Simulation of Semiconductor Devices and Processes SISDEP 93 continues a series of conferences which was initiated in 1984 by K Board and D R J Owen at the University College of Wales

Swansea where it took place a second time in 1986 Its organization was succeeded by G Baccarani and M Rudan at the University of Bologna in 1988 and W Fichtner and D Aemmer at the Federal Institute of Technology in Zurich in 1991 This year the conference is held at the Technical University of Vienna Austria September 7 9 1993 This conference shall provide an international forum for the presentation of out standing research and development results in the area of numerical process and de vice simulation The miniaturization of today s semiconductor devices the usage of new materials and advanced process steps in the development of new semiconduc tor technologies suggests the design of new computer programs This trend towards more complex structures and increasingly sophisticated processes demands advanced simulators such as fully three dimensional tools for almost arbitrarily complicated geometries With the increasing need for better models and improved understand ing of physical effects the Conference on Simulation of Semiconductor Devices and Processes brings together the simulation community and the process and device en gineers who need reliable numerical simulation tools for characterization prediction and development

Parallel Computing: Fundamentals, Applications and New Directions E.H. D'Hollander,G.R. Joubert,Frans Peters,Ulrich Trottenberg,1998-07-22 This volume gives an overview of the state of the art with respect to the development of all types of parallel computers and their application to a wide range of problem areas The international conference on parallel computing ParCo97 Parallel Computing 97 was held in Bonn Germany from 19 to 22 September 1997 The first conference in this biannual series was held in 1983 in Berlin Further conferences were held in Leiden The Netherlands London UK Grenoble France and Gent Belgium From the outset the aim with the ParCo Parallel Computing conferences was to promote the application of parallel computers to solve real life problems In the case of ParCo97 a new milestone was reached in that more than half of the papers and posters presented were concerned with application aspects This fact reflects the coming of age of parallel computing Some 200 papers were submitted to the Program Committee by authors from all over the world The final programme consisted of four invited papers 71 contributed scientific industrial papers and 45 posters In addition a panel discussion on Parallel Computing and the Evolution of Cyberspace was held During and after the conference all final contributions were refereed Only those papers and posters accepted during this final screening process are included in this volume The practical emphasis of the conference was accentuated by an industrial exhibition where companies demonstrated the newest developments in parallel processing equipment and software Speakers from participating companies presented papers in industrial sessions in which new developments in parallel computing were reported

Technology CAD Systems Franz Fasching,Stefan Halama,Siegfried Selberherr,2012-12-06 As the cost of developing new semiconductor technology at ever higher bit gate densities continues to grow the value of using accurate TCAD simu lation tools for design and development becomes more and more of a necessity to compete in today s business The ability to tradeoff wafer starts in an advanced piloting facility for

simulation analysis and optimization utilizing a virtual fab S W tool set is a clear economical asset for any semiconductor development company Consequently development of more sophisticated accurate physics based and easy to use device and process modeling tools will receive continuing attention over the coming years The cost of maintaining and paying for one s own internal modeling tool development effort however has caused many semiconductor development companies to consider replacing some or all of their internal tool development effort with the purchase of vendor modeling tools While some notably larger companies have insisted on maintaining their own internal modeling tool development organization others have elected to depend totally on the tools offered by the TCAD vendors and have consequently reduced their modeling staffs to a bare minimal support function Others are seeking to combine the best of their internally developed tool suite with robust proven tools provided by the vendors hoping to achieve a certain synergy as well as savings through this approach In the following sections we describe IBM s internally developed suite of TCAD modeling tools and show several applications of the use of these tools

International Conference on Simulation of Semiconductor Processes and Devices, 2000 **High Performance Scientific and Engineering Computing** Hans-Joachim Bungartz, Franz Durst, Christoph Zenger, 2012-12-06 Since the creation of the term Scientific Computing and of its German counterpart Wissenschaftliches Rechnen whoever has to be blamed for that scientists from outside the field have been confused about the somewhat strange distinction between scientific and non scientific computations And the insiders i e those who are at least convinced of always computing in a very scientific way are far from being happy with this summary of their daily work even if further characterizations like High Performance or Engineering try to make things clearer usually with very modest success however Moreover to increase the unfortunate confusion of terms who knows the differences between Computational Science and Engineering as indicated in the title of the series these proceedings were given the honour to be published in and Scientific and Engineering Computing as chosen for the title of our book Actually though the protagonists of scientific computing persist in its independence as a scientific discipline and rightly so of course the ideas behind the term diverge wildly Consequently the variety of answers one can get to the question What is scientific computing is really impressive and ranges from the serious nothing else but numerical analysis up to the more mocking consuming as much CPU time as possible on the most powerful number crunchers accessible
