On The Logic And Learning Of Language:

On the Logic and Learning of Language Sean A. Fulop, 2004-10-14 This book presents the author's research on automatic learning procedures for categorial grammars of natural languages. The research program spans a number of intertwined disciplines including syntax, semantics, learnability theory, logic, and computer science. The theoretical framework employed is an extension of categorial grammar that has come to be called multimodal or type logical grammar. The first part of the book presents an expository summary of how grammatical sentences of any language can be deduced with a specially designed logical calculus that treats syntactic categories as its formulae. Some such Universal Type Logic is posited to underlie the human language faculty and all linguistic variation is captured by the different systems of semantic and syntactic categories which are assigned in the lexicons of different languages. The remainder of the book is devoted to the explicit formal development of computer algorithms which can learn the lexicons of type logical grammars from learning samples of annotated sentences. The annotations consist of semantic terms expressed in the lambda calculus and may also include an unlabeled tree structuring over the sentence. The major features of the research include the following: We show how the assumption of a universal linguistic component, the logic of language, is not incompatible with the conviction that every language needs a different system of syntactic and semantic categories for its proper description. The supposedly universal linguistic categories descending from antiquity (noun, verb, etc.) are summarily discarded. Languages are here modeled as consisting primarily of sentence trees labeled with semantic structures, a new mathematical class of such term-labeled tree languages is developed which cross-cuts the well-known Chomsky hierarchy and provides a formal restrictive condition on the nature of human languages. The human language acquisition mechanism is postulated to be biased such that it assumes all input language samples are drawn from the above syntactically homogeneous class; in this way the universal features of human languages arise not just from the innate logic of language but also from the innate biases which govern language learning. This project represents the first complete explicit attempt to model the acquisition of human language since Steve Pinker's groundbreaking 1984 publication *Language Learnability and Language Development*. *Learning Language in Logic* James Cussens, Saso Dzeroski, 2003-07-31 This volume has its origins in the first Learning Language in Logic (LLL) workshop which took place on 30 June 1999 in Bled, Slovenia, immediately after the Ninth International Workshop on Inductive Logic Programming (ILP 99) and the Sixteenth International Conference on Machine Learning (ICML 99). LLL is a research area lying at the intersection of computational linguistics, machine learning, and computational logic. As such, it is of interest to all those working in these three fields. I am pleased to say that the workshop attracted submissions from both the natural language processing (NLP) community and the ILP community, reflecting the essentially multi-disciplinary nature of LLL. Eric Brill and Ray Mooney were invited speakers at the workshop and their contributions to this volume reflect the topics of their stimulating invited talks. After the workshop, authors were given the opportunity to improve their papers, the results of which

are contained here However this volume also includes a substantial amount of two sorts of additional material Firstly since our central aim is to introduce LLL work to the widest possible audience two introductory chapters have been written Dzeroski Cussens and Manandhar provide an introduction to ILP and LLL and Thompson provides an introduction to NLP

Computational Logic: Logic Programming and Beyond Antonis C. Kakas,Fariba Sadri,2003-08-02 Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker a charismatic communicator and a forceful intellectual leader The logic programming community hereby and herein conveys its respect and thanks to him for his pivotal role in creating and fostering the conceptual paradigm which is its raison d'être The diversity of interests covered here reflects the variety of Bob's concerns Read on It is an intellectual feast Before you begin permit me to send him a brief personal but public message Bob how right you were and how wrong I was I should explain When Bob arrived in Edinburgh in 1967 resolution was as yet fairly new having taken several years to become at all widely known Research groups to investigate various aspects of resolution sprang up at several institutions the one organized by Bernard Meltzer at Edinburgh University being among the first For the half dozen years that Bob was a leading member of Bernard's group I was a frequent visitor to it and I saw a lot of him We had many discussions about logic
