

Function Spaces of Polyanalytic Functions

Luis Daniel Abreu and Hans G. Feichtinger

Abstract This article is meant as both an introduction and a review of some of the recent developments on Fock and Bergman spaces of polyanalytic functions. The study of polyanalytic functions is a classic topic in complex analysis. However, thanks to the interdisciplinary transference of knowledge promoted within the activities of HCAA network it has benefited from a cross-fertilization with ideas from signal analysis, quantum physics, and random matrices. We provide a brief introduction to those ideas and describe some of the results of the mentioned cross-fertilization. The departure point of our investigations is a thought experiment related to a classical problem of multiplexing of signals, in other words, how to send several signals simultaneously using a single channel.

Polyanalytic Functions:

Polyanalytic Functions Mark Benevich Balk,1991-11-13 **Complex Analysis I** A.A. Gonchar,Viktor P. Havin,N.K. Nikolski,2013-11-11 A two part volume containing a comprehensive description of the theory of entire and meromorphic functions of one complex variable and its applications and a detailed review of recent investigations concerning the function theoretical peculiarities of polyanalytic functions boundary behaviour value distributions degeneration uniqueness etc

Polyanalytic Type Function Spaces Nikolai Vasilevski,2024-12-31 This book is about function spaces aspects of polyanalytic functions a topic that has gained a lot of attention in the past decades This book fills a gap in literature and is written by a leading researcher in the field Rather than studying polyanalytic functions from a complex analysis point of view it considers the Lie algebraic part of the theory Several generalizations are offered The presented theory has many applications including to quantum physics An extensive introduction to the topic is provided making the book accessible to specialists and newcomers alike

Complex Analysis I A.A. Gonchar,Viktor P. Havin,N.K. Nikolski,2012-11-30 A two part volume containing a comprehensive description of the theory of entire and meromorphic functions of one complex variable and its applications and a detailed review of recent investigations concerning the function theoretical peculiarities of polyanalytic functions boundary behaviour value distributions degeneration uniqueness etc *Polyanalytic Functions*

William W. Bosch,1970 *Harmonic and Complex Analysis and its Applications* Alexander Vasil'ev,2013-11-09 This volume highlights the main results of the research performed within the network Harmonic and Complex Analysis and its Applications HCAA which was a five year 2007 2012 European Science Foundation Programme intended to explore and to strengthen the bridge between two scientific communities analysts with broad backgrounds in complex and harmonic analysis and mathematical physics and specialists in physics and applied sciences It coordinated actions for advancing harmonic and complex analysis and for expanding its application to challenging scientific problems Particular topics considered by this Programme included conformal and quasiconformal mappings potential theory Banach spaces of analytic functions and their applications to the problems of fluid mechanics conformal field theory Hamiltonian and Lagrangian mechanics and signal processing This book is a collection of surveys written as a result of activities of the Programme and will be interesting and useful for professionals and novices in analysis and mathematical physics as well as for graduate students Browsing the volume the reader will undoubtedly notice that as the scope of the Programme is rather broad there are many interrelations between the various contributions which can be regarded as different facets of a common theme

Toeplitz Operators and Random Matrices Estelle Basor,Albrecht Böttcher,Torsten Ehrhardt,Craig A. Tracy,2023-01-01 This volume is dedicated to the memory of Harold Widom 1932 2021 an outstanding mathematician who has enriched mathematics with his ideas and ground breaking work since the 1950s until the present time It contains a biography of Harold Widom personal notes written by his former students or colleagues and also his last previously

unpublished paper on domain walls in a Heisenberg Ising chain Widom's most famous contributions were made to Toeplitz operators and random matrices While his work on random matrices is part of almost all the present day research activities in this field his work in Toeplitz operators and matrices was done mainly before 2000 and is therefore described in a contribution devoted to his achievements in just this area The volume contains 18 invited and refereed research and expository papers on Toeplitz operators and random matrices These present new results or new perspectives on topics related to Widom's work

Quaternionic Hilbert Spaces and Slice Hyperholomorphic Functions Daniel

Alpay, Fabrizio Colombo, Irene Sabadini, 2024-12-09 The purpose of the present book is to develop the counterparts of Banach and Hilbert spaces in the setting of slice hyperholomorphic functions Banach and Hilbert spaces of analytic functions in one or several complex variables play an important role in analysis and related fields Besides their intrinsic interest such spaces have numerous applications The book is divided into three parts In the first part some foundational material on quaternionic functions and functional analysis are introduced The second part is the core of the book and contains various types of functions spaces ranging from the Hardy spaces also in the fractional case to the Fock space extended to the case of quaternions The third and final part present some further generalization Researchers in functional analysis and hypercomplex analysis will find this book a key contribution to their field but also researchers in mathematical physics especially in quantum mechanics will benefit from the insights presented

Functional Analysis and Geometry: Selim Grigorievich Krein Centennial Peter Kuchment, Evgeny Semenov, 2019-07-26 This is the first of two volumes dedicated to the centennial of the distinguished mathematician Selim Grigorievich Krein The companion volume is Contemporary

Mathematics Volume 734 Krein was a major contributor to functional analysis operator theory partial differential equations fluid dynamics and other areas and the author of several influential monographs in these areas He was a prolific teacher graduating 83 Ph D students Krein also created and ran for many years the annual Voronezh Winter Mathematical Schools which significantly influenced mathematical life in the former Soviet Union The articles contained in this volume are written by prominent mathematicians former students and colleagues of Selim Krein as well as lecturers and participants of Voronezh Winter Schools They are devoted to a variety of contemporary problems in functional analysis operator theory several complex variables topological dynamics and algebraic convex and integral geometry

Complex Analysis and Potential Theory Andre Boivin, Javad Mashregi, 2012 This is the proceedings volume of an international conference entitled

Complex Analysis and Potential Theory which was held to honor the important contributions of two influential analysts Kohur N GowriSankaran and Paul M Gauthier in June 2011 at the Centre de Recherches Mathematiques CRM in Montreal More than fifty mathematicians from fifteen countries participated in the conference The twenty four surveys and research articles contained in this book are based on the lectures given by some of the most established specialists in the fields They reflect the wide breadth of research interests of the two honorees from potential theory on trees to approximation on Riemann

surfaces from universality to inner and outer functions and the disc algebra from branching processes to harmonic extension and capacities from harmonic mappings and the Harnack principle to integration formulae in \mathbb{C}^n and the Hartogs phenomenon from fine harmonicity and plurisubharmonic functions to the binomial identity and the Riemann hypothesis and more This volume will be a valuable resource for specialists young researchers and graduate students from both fields complex analysis and potential theory It will foster further cooperation and the exchange of ideas and techniques to find new research perspectives

Generalized Analytic Functions Helmut Florian, 1998-05-31 Contains papers from a January 1997 conference at the Technical University of Graz Part I looks at generalized analytic functions dealing not only with problems in the complex plane but also related problems in higher dimensions where several complex variables and Clifford Analysis are used Part II is devoted to applications of partial differential equations to mechanics with contributions on boundary elements and asymptotic methods and hemivariational inequalities A substantial number of papers in Part II deal with problems of ocean acoustics No index Annotation copyrighted by Book News Inc Portland OR Transactions of the American Mathematical Society, 1974 Differential Equations and Dynamical Systems, 2002 **Analytic and Geometric Issues of Complex Analysis**, 2001 *Russian Mathematical Surveys*, 1987 *Russian Mathematics*, 1992

The Enigmatic Realm of **Polyanalytic Functions**: Unleashing the Language is Inner Magic

In a fast-paced digital era where connections and knowledge intertwine, the enigmatic realm of language reveals its inherent magic. Its capacity to stir emotions, ignite contemplation, and catalyze profound transformations is nothing lacking extraordinary. Within the captivating pages of **Polyanalytic Functions** a literary masterpiece penned with a renowned author, readers set about a transformative journey, unlocking the secrets and untapped potential embedded within each word. In this evaluation, we shall explore the book's core themes, assess its distinct writing style, and delve into its lasting affect the hearts and minds of people who partake in its reading experience.
