Polymer Reaction Engineering:

Polymer Reaction Engineering Karl-Heinz Reichert, 1983 [Polymer Reaction Engineering](#) Jose Asua, 2008-04-15
Polymers are an example of products by process where the final product properties are mostly determined during manufacture in the reactor. An understanding of processes occurring in the polymerization reactor is therefore crucial to achieving efficient, consistent, safe, and environmentally friendly production of polymeric materials. Polymer Reaction Engineering provides the link between the fundamentals of polymerization kinetics and polymer microstructure achieved in the reactor. Organized according to the type of polymerization, each chapter starts with a description of the main polymers produced by the particular method, their key microstructural features, and their applications. Polymerization kinetics and its effect on reactor configuration, mass and energy balances, and scale up are covered in detail. The text is illustrated with examples emphasizing general concepts, principles, and methodology. Written as an authoritative guide for chemists and chemical engineers in industry and academia, *Polymer Reaction Engineering* will also be a key reference source for advanced courses in polymer chemistry and technology.

Modeling and Simulation in Polymer Reaction Engineering Klaus-Dieter Hungenberg, Michael Wulkow, 2018-05-29
Introducing a unique modular approach to modeling polymerization reactions, this useful book will enable practitioners, chemists, and engineers alike to set up and structure their own models for simulation software like Predici, C, MatLab, or others. The generic modules are exemplified for concrete situations for various reactor types and reaction mechanisms and allow readers to quickly find their own point of interest, a highly useful information source for polymer engineers and researchers in industry and academia.

8th International Workshop on Polymer Reaction Engineering Gerhard Kreysa, 2005-01-14
By representing the proceedings of the 8th International Workshop on Polymer Reaction Engineering held at the University of Hamburg, October 3-6, 2004, this volume covers new results, applications, and actual trends in the development of polymerization reactions, reactors, and processes. The latest event of this well-established international workshop series highlights especially promising areas such as polymer thermodynamics, polymerization kinetics, mixing, and scale-up reactor safety, process intensification, a reaction technology for multi-component, high-performance polymer systems. Additionally, unsolved fundamental reaction engineering problems in the polymer industries and new options of academic research are identified and discussed.
