Abstract—This research investigates the integration of artificial intelligence (AI) and DevOps in computer-based human resource (HR) systems, focusing on their collective impact on system efficiency, agility, and performance in Chinese universities. A quantitative methodology was employed, utilizing mathematical modeling and calculus functions to assess how AI learning progression and DevOps deployment frequency influence HR system outcomes of Chinese Universities. In short, the results demonstrate that while AI and DevOps integration significantly boosts HR system efficiency and agility, diminishing returns occur when both are maximized beyond certain thresholds. The findings also highlight an optimal balance where the synergy between AI and DevOps enhances overall system performance. The study contributes to understanding how advanced technologies can transform University HR management processes and improve decision-making.

Keywords—AI integration, DevOps, Human resource systems Universities, System efficiency, Organizational agility, Calculus modeling, Optimization.

I. INTRODUCTION

In the rapidly evolving field of Human Resource (HR) management, the integration of Artificial Intelligence (AI) and DevOps has emerged as a transformative force. The convergence of AI and DevOps within HR systems holds promise for enhancing operational efficiency, reducing system downtimes, and improving decision-making processes. As organizations increasingly adopt AI technologies and DevOps practices, understanding their combined impact on HR systems becomes crucial. This study explores the integration of AI and DevOps in computer HR systems through a quantitative analysis, aiming to fill significant research gaps and address pressing research questions [1,2,3].

Furthermore, the integration of AI in HR systems has been heralded for its potential to revolutionize various HR functions, from recruitment and performance evaluation to employee engagement and training. AI-powered tools facilitate data-driven decision-making, streamline recruitment processes, and enhance predictive analytics for employee performance. Concurrently, DevOps practices, which focus on the seamless integration of development and operations, aim to improve system reliability, speed up updates, and minimize downtime [3-5]. While AI and DevOps individually offer substantial benefits, their combined effects on HR systems remain underexplored in Chinese Universities.

Despite the growing interest in AI and DevOps individually, the integration of these technologies within HR systems has received limited attention. Current research primarily focuses on the isolated benefits of AI or DevOps, without considering their combined effects on HR operations [6]. This gap in the literature presents an opportunity to explore how AI and DevOps can synergistically improve HR systems. Existing studies often overlook the quantitative impact of AI and DevOps integration on various HR metrics, such as efficiency, downtime, satisfaction, update speed, and cost.

Moreover, while there is substantial research on AI applications in HR and DevOps practices in IT systems, few studies address the intersection of these domains within the context of HR systems. This study aims to bridge this gap by providing a comprehensive analysis of how the integration of AI and DevOps influences HR system performance and outcomes. By addressing this research gap, the study contributes to a deeper understanding of the practical implications of combining AI and DevOps in HR management, offering valuable insights for both academia and industry practitioners [7-9].

Furthermore, this research seeks to elucidate the effects of integrating AI and DevOps in HR systems, addressing key research questions and filling existing gaps in the literature. The findings will provide a nuanced understanding of how these technologies collectively impact HR operations, paving the way for more effective and efficient HR management practices in Chinese universities.

The rapid advancement of artificial intelligence (AI) and DevOps in recent years has significantly transformed various industries, including human resource (HR) management. In particular, the integration of AI and DevOps has created new opportunities for improving the efficiency, agility, and performance of HR systems. As organizations increasingly adopt AI-driven tools for recruitment, talent management, and training, they are also relying on DevOps practices to streamline software development, deployment, and operations. The combination of these two technologies has the potential to revolutionize HR systems, offering enhanced decision-making capabilities and more agile, scalable infrastructures [8,9,10].
