Gaines,2000 In order to incorporate trust into e commerce public key cryptography and basic communication one must understand and effectively manage trust Various Internet security protocols have attempted to address this lack of trust However these protocols do not incorporate the user s trust into these protocols Computational models of trust have been developed in an attempt to automate the logic variables and thought processes that a human performs when making a trust decision Due to the fact that trust is based on a subjective belief the models require the assignment of metrics to belief variables or attributes that will have value when evaluating trust These models address the notion of trust in many different ways and both their definitions and metrics vary significantly This thesis evaluates the various trust models It is necessary to understand how trust is defined in each model in order to evaluate how well the operation of a system based on the model satisfies the requirements of the users Trust models are evaluated based on their characteristics environmental references metrics variables used and outputs This thesis concludes with the assessment of a practical application of a trust model to the DoD s PKI system *Public-Key Infrastructure 28 Success Secrets - 28 Most Asked Questions on Public-Key Infrastructure - What You Need to Know* Margaret Baldwin,2014-10-25 A Public Key Infrastructure look that s entirely new There has never been a Public Key Infrastructure Guide like this It contains 28 answers much more than you can imagine comprehensive answers and extensive details and references with insights that have never before been offered in print Get the information you need fast This all embracing guide offers a thorough view of key knowledge and detailed insight This Guide introduces what you want to know about Public Key Infrastructure A quick look inside of some of the subjects covered Features new to Windows 8 Secure boot Rootkit Integrity checking Server based signatures Public key Description Public key infrastructure Simple public key infrastructure Digital certificate Public key infrastructure Overview Password manager Security token password managers X 509 History and usage Public key certificate Asymmetric Algorithms Description Public key cryptography Description Public key infrastructure Methods of certification Internet in Estonia History Encryption key Need for airing Digital certificates Key agreement protocol Public keys MaidSafe Kademlia Routing Improvements Authenticate Information content Identity certificate X 509 Public Key Infrastructure X 509 Working Group Asymmetric key algorithm Description Network Security Services Interoperability and open standards E commerce payment system Common Access Card Integrated circuit chip ICC
