## Screening For Biological Response Modifiers:

**Screening for Biological Response Modifiers: Methods and Rationale** James E. Talmadge, Isaiah J. Fidler, R.K. Oldham, 2012-12-06 The observation in the 1950s that nitrogen mustard and other toxic chemicals could induce antitumor responses in patients with refractory lymphoma initiated a massive search for active chemotherapeutic agents The initial observations stimulated a search for new chemotherapeutic agents which might have increased antitumor activity with less toxicity for normal tissues To aid in the search for these new chemicals and to attempt to distinguish among the many toxic chemicals which might be candidates for clinical studies the National Cancer Institute the pharmaceutical industry and the cancer research laboratories of most Western nations developed systems for screening drugs for antitumor activity Perhaps the most extensive screening program was established by the National Cancer Institute 1 This screening program has evolved over the last two decades an evolution which has been repeatedly reviewed 2 5 Various screening programs in use have examined over 500 000 compounds as potential anticancer agents From these there are now approximately forty anticancer drugs in clinical use The utility of these compounds and their toxicities have been reviewed on many occasions It is now apparent that more active and less toxic anticancer drugs are needed It is also clear that the current screening programs are identifying compounds with similar levels of activity and with continuing moderate to severe toxicity 6

**Biological Response Modifiers** Paul F. Torrence, 1985 Biological Response Modifiers New Approaches to Disease Intervention focuses on biological response modifiers BRMs and the ways they provide novel approaches to disease control It examines how BRMs act through an organism's own biological response mechanisms and how their mechanisms of action can be utilized to develop new modalities of chemotherapy Organized into 15 chapters this volume begins with an overview of specific agents and approaches to biological therapy the basic concepts of immunity and BRM screening It then discusses interferons and their immunoregulatory functions

**Research Awards Index**, 1979 **Cancer on Trial** Peter Keating, Alberto Cambrosio, 2014-04-18 There were no medical oncologists until a few decades ago In the early 1960s not only were there no such specialists many practitioners regarded the treatment of terminally ill cancer patients with heroic courses of chemotherapy as highly questionable Physicians loath to assign patients randomly to competing treatments also expressed their outright opposition to the randomized clinical trials that were then relatively rare And yet today these trials form the basis of medical oncology How did such a spectacular change occur How did medical oncology move from a non entity and in some regards a reviled practice to the central position it now occupies in modern medicine **Cancer on Trial** answers these questions by exploring how practitioners established a new style of practice at the center of which lies the cancer clinical trial

Behring Institute Mitteilungen, 1986 *Progress in Experimental Tumor Research*, 1960 *ICRDB Cancergram*, 1986 Biological Response Modifiers Paul Torrence, 2012-12-02 Biological Response Modifiers New Approaches to Disease Intervention focuses on biological response modifiers BRMs and the ways they provide novel

approaches to disease control It examines how BRMs act through an organism's own biological response mechanisms and how their mechanisms of action can be utilized to develop new modalities of chemotherapy Organized into 15 chapters this volume begins with an overview of specific agents and approaches to biological therapy the basic concepts of immunity and BRM screening It then discusses interferons and their immunoregulatory functions mechanism of interferon action how nucleic acids and polynucleotides regulate the immune system clinical applications of thymosins and other thymic hormones the antibacterial and antineoplastic properties of tuftsin and production and characterization of tumor necrosis factor The reader is also introduced to detection and activity of colony stimulating factor the role of neuroendocrine hormones in the immune system chalone and other endogenous inhibitors of cell proliferation biochemistry of lymphotoxins muramyl peptides as immunopharmacological response modifiers biological activities of transfer factor in leukocyte dialysates and requirements for activation and growth of human lymphocytes This book is a valuable resource for immunologists clinicians biochemists and organic medicinal chemists
