Perspectives From Artificial Intelligence Databases And Programming Languages:

On Conceptual Modelling M.L. Brodie, J. Mylopoulos, J.W. Schmidt, 1984 The growing demand for systems of ever increasing complexity and precision has stimulated the need for higher level concepts tools and techniques in every area of Computer Science Some of these areas in particular Artificial Intelligence Databases and Programming Languages are attempting to meet this demand by defining a new more abstract level of system description We call this new level conceptual in recognition of its basic conceptual nature In Artificial Intelligence the problem of designing an expert system is seen primarily as a problem of building a knowledge base that represents knowledge about an enterprise Consequently Knowledge Representation is viewed as a central issue in Artificial Intelligence research Database design methodologies developed during the last five years are almost unanimous in offering semantic data models in terms of which the designer directly and naturally models an enterprise before proceeding to a detailed logical and physical database design In Programming Languages different forms of abstraction which allow implementation independent specifications of data functions and control have been a major research theme for a decade To emphasize the common goals of these three research efforts we call this new activity conceptual modelling

Readings in Artificial Intelligence and Databases

John Mylopoulos, Michael L. Brodie, 2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining active databases and knowledge based expert systems This volume collects the primary readings on the interactions actual and potential between these two fields The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s An in depth introduction discusses basic research motivations giving a survey of the history concepts and terminology of the interaction Major themes approaches and results open issues and future directions are all discussed including the results of a major survey conducted by the editors of current work in industry and research labs Thirteen sections follow each with a short introduction Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high level data languages definition and maintenance of integrity constraints in databases and knowledge bases natural language front ends object oriented database management systems implementation issues such as concurrency control and error recovery and representation of time and knowledge incompleteness from the viewpoints of databases logic programming and AI

Database Systems For Advanced Applications '91 - Proceedings Of The 2nd International Symposium On Database Systems For Advanced Applications Akifumi Makinouchi, 1992-09-21 This book provides an authoritative overview of the global development of surgical paediatrics Biographical accounts of key people who developed this relatively new specialty many of whom are now household names are presented The compendium also acknowledges the enormous contribution of imaging ultrasound MRI and PET scans minimal invasive surgery and fetal surgery as well as the role of related journals and associations in the progress of surgical paediatrics Many of the

contributors have been instrumental to the development of surgical paediatrics in their respective countries and have considerable worldwide influence on the management of children requiring surgical care Through their valuable insight and first hand experience this book not only shines a light on the past achievements of previous generations of paediatric surgeons but also serves as a model to encourage future generations to do likewise

Query Processing in Database Systems

W. Kim,D.S. Reiner,Don Batory,2012-12-06 This book is an anthology of the results of research and development in database query processing during the past decade The relational model of data provided tremendous impetus for research into query processing Since a relational query does not specify access paths to the stored data the database management system DBMS must provide an intelligent query processing subsystem which will evaluate a number of potentially efficient strategies for processing the query and select the one that optimizes a given performance measure The degree of sophistication of this subsystem often called the optimizer critically affects the performance of the DBMS Research into query processing thus started has taken off in several directions during the past decade The emergence of research into distributed databases has enormously complicated the tasks of the optimizer In a distributed environment the database may be partitioned into horizontal or vertical fragments of relations Replicas of the fragments may be stored in different sites of a network and even migrate to other sites The measure of performance of a query in a distributed system must include the communication cost between sites To minimize communication costs for queries involving multiple relations across multiple sites optimizers may also have to consider semi join techniques

Atkinson, Peter Buneman, Ronald Morrison, 2012-12-06 There is an established interest in integrating databases and programming languages This book on Data Types and Persistence evolved from the proceedings of a workshop held at the Appin in August 1985 The purpose of the Appin workshop was to focus on these two aspects persistence and data types and to bring together people from various disciplines who have thought about these problems Particular topics of interest include the design of type systems appropriate for database work the representation of persistent objects such as data types and modules and the provision of orthogonal persistence and certain aspects of transactions and concurrency The programme was broken into three sessions morning late afternoon and evening to allow the participants to take advantage of two beautiful days in the Scottish Highlands The financial assistance of the Science and Engineering Research Council the National Science Foundation and International Computers Ltd is gratefully acknowledged We would also like to thank Isabel Graham Anne Donnelly and Estelle Taylor for their help in organising the workshop Finally our thanks to Pete Bailey Ray Carick and Dave Munro for the immense task they undertook in typesetting the book The convergence of programming languages and databases to a coherent and consistent whole requires ideas from and adjustment in both intellectual camps The first group of chapters in this book present ideas and adjustments coming from the programming language research community This community frequently discusses types and uses them as a framework for other discussions
