Computer Literature Bibliography, 1946 to 1963 William Wallace Youden, 1965 **Lectures on the Logic of Computer Programming** Zohar Manna, 1980-01-01 This monograph deals with aspects of the computer programming process that involve techniques derived from mathematical logic The author focuses on proving that a given program produces the intended result whenever it halts that a given program will eventually halt that a given program is partially correct and terminates and that a system of rewriting rules always halts Also the author describes the intermediate behavior of a given program and discusses constructing a program to meet a given specification
