The Numerical Solution of Two-point Boundary Problems in Ordinary Differential Equations Leslie Fox,1957
Numerical Solution of Two Point Boundary Value Problems Herbert B. Keller,1976-01-01 Lectures on a unified theory of and practical procedures for the numerical solution of very general classes of linear and nonlinear two point boundary value problems *Numerical Methods for Two-Point Boundary-Value Problems* Herbert B. Keller,2018-11-14 Elementary yet rigorous this concise treatment explores practical numerical methods for solving very general two point boundary value problems The approach is directed toward students with a knowledge of advanced calculus and basic numerical analysis as well as some background in ordinary differential equations and linear algebra After an introductory chapter that covers some of the basic prerequisites the text studies three techniques in detail initial value or shooting methods finite difference methods and integral equations methods Sturm Liouville eigenvalue problems are treated with all three techniques and shooting is applied to generalized or nonlinear eigenvalue problems Several other areas of numerical analysis are introduced throughout the study The treatment concludes with more than 100 problems that augment and clarify the text and several research papers appear in the Appendixes *Two-point Boundary Value Problems: Shooting Methods* Sanford M. Roberts,Jerome S. Shipman,1972 **Numerical Solution of Two Point Boundary Value Problems** Herbert B. Keller,1984 **On the Numerical Solution of Two-point Boundary Value Problems II.** P. Starr,YALE UNIV NEW HAVEN CT Dept. of COMPUTER SCIENCE.,1990 In a recent paper Greengard and Rokhlin introduce a numerical technique for the rapid solution of integral equations resulting from linear two point boundary value problems for second order ordinary differential equations In this paper we extend the method to systems of ordinary differential equations After reducing the system of differential equations to a system of second kind integral equations we discretize the latter via a high order Nystrom scheme A somewhat involved analytical apparatus is then constructed which allows for the solution of the discrete system using O N p squared n cubed operations with N the number of nodes on the interval p the desired order of convergence and n the number of equations in the system Thus the advantages of the integral equation formulation small condition number insensitivity to boundary layers insensitivity to end point singularities etc are retained while achieving a computational efficiency previously available only to finite difference of finite element methods We in addition present a Newton method for solving boundary value problems for nonlinear first order systems in which each Newton iterate is the solution of a second kind integral equation the analytical and numerical advantages of integral equations are thus obtained for nonlinear boundary value problems kr On the Numerical Solution of Two-point Boundary Value Problems Yale University. Department of Computer Science,Leslie Greengard,V. Rokhlin,1989 Abstract In this paper we present a new numerical method for the solution of linear two point boundary value problems of ordinary differential equations After reducing the differential equation to a second kind integral equation we discretize the latter via a high order Nystr m scheme

A somewhat involved analytical apparatus is then constructed which allows for the solution of the discrete system using O N multiplied by p superscript 2 operations where N is the number of nodes on the interval and p is the desired order of convergence Thus the advantages of the integral equation formulation small condition number insensitivity to boundary layers insensitivity to end point singularities etc are retained while achieving a computational efficiency previously available only to finite difference or finite element methods *On the Numerical Solution of Two-point Boundary Value Problems II.* Yale University. Department of Computer Science,Harold P. Starr,1990 Thus the advantages of the integral equation formulation small condition number insensitivity to boundary layers insensitivity to end point singularities etc are retained while achieving a computational efficiency previously available only to finite difference or finite element methods We in addition present a Newton method for solving boundary value problems for nonlinear first order systems in which each Newton iterate is the solution of a second kind integral equation the analytical and numerical advantages of integral equations are thus obtained for nonlinear boundary value problems *The Numerical Solution of Two Point Boundary Value Problems in Ordinary Differential Equations* Kate Woodham,1984 **Numerical Solution of Two-point Boundary-value Problems** Andrew Benjamin White,California Institute of Technology. A. N. Oliveira,1967 **The Numerical Solution of Two-point Boundary Problem in Ordinary Differential Equations** L. Fox,1957 **The Numerical Solution of Two-point Boundary Problems in Differential Equations** ,1957 NUMERICAL SOLUTION OF TWO-POINT BOUNDARY PROBLEMS IN ORDINARY DIFFERENTIAL EQUATION ,1957 **The Factorization Method for the Numerical Solution of Two Point Boundary Value Problems for Linear ODE's** Ivo Babuška,Václav Majer,1986 The theoretical analysis and computational implementation of factorization based methods for the numerical solution of linear boundary value problems for ordinary differential equations are presented The methods are optimal with respect to certain clearly defined criteria Numerical examples show the effectiveness of a general code based on the factorization method Direct methods are characterized by the solution of global linear algebraic systems for the discrete solution In this sense multi shooting may be regarded as a hybrid method between the two classes A sophisticated recent example of multi shooting is the BOUNDPAC package Indirect solution methods are characterized by the association of the boundary value problem with certain auxiliary initial value problems IVP The auxiliary IVP s are generally solved uni directionally forward but a subclass of initial value based methods are based on bi directional double sweep strategies Numerical Solutions of Boundary Value Problems for Ordinary Differential Equations A.K. Aziz,2014-05-10 Numerical Solutions of Boundary Value Problems for Ordinary Differential Equations covers the proceedings of the 1974 Symposium by the same title held at the University of Maryland

Baltimore Country Campus This symposium aims to bring together a number of numerical analysis involved in research in both theoretical and practical aspects of this field This text is organized into three parts encompassing 15 chapters Part I reviews the initial and boundary value problems Part II explores a large number of important results of both theoretical and practical nature of the field including discussions of the smooth and local interpolant with small K th derivative the occurrence and solution of boundary value reaction systems the posteriori error estimates and boundary problem solvers for first order systems based on deferred corrections Part III highlights the practical applications of the boundary value problems specifically a high order finite difference method for the solution of two point boundary value problems on a uniform mesh This book will prove useful to mathematicians engineers and physicists *Numerical Solutions of Two-point Boundary Value Problems* James Leon Clark,1966 **A Method for the Numerical Solution of Two-Point Boundary Value Problems Based on the Use of Volterra Integral** H. Fujita,L. B. Rall,WISCONSIN UNIV MADISON MATHEMATICS RESEARCH CENTER.,1973 Suppose that a given two point boundary value problem to be solved is a perturbation of one for which a considerable amount of analytic information is available in particular the Green s function of the unperturbed problem is known In this case one can construct an analytic method for the solution of the perturbed problem which involves only the solution of a Volterra integral equation Discretization of this method which is a version of the classical shooting procedure leads to a numerical technique for the solution of perturbed boundary value problems Under suitable assumptions convergence of the numerical method is established and estimates are obtained for the rate of convergence Attention is devoted to the cases in which the unperturbed differential operator is regular or mildly singular Linear and nonlinear problems are considered Modified author abstract
