Modulating Mirrors:

Photonic Microsystems Olav Solgaard, 2009-04-05 This book describes Microelectromechanical systems MEMS technology and demonstrates how MEMS allow miniaturization parallel fabrication and efficient packaging of optics as well as integration of optics and electronics The book shows how the characteristics of MEMS enable practical implementations of a variety of applications including projection displays fiber switches interferometers and spectrometers The authors conclude with an up to date discussion of the need for the combination of MEMS and Photonic crystals *Optical and Digital Image Processing* Gabriel Cristobal, Peter Schelkens, Hugo Thienpont, 2013-02-12 In recent years Moore's law has fostered the steady growth of the field of digital image processing though the computational complexity remains a problem for most of the digital image processing applications In parallel the research domain of optical image processing has matured potentially bypassing the problems digital approaches were suffering and bringing new applications The advancement of technology calls for applications and knowledge at the intersection of both areas but there is a clear knowledge gap between the digital signal processing and the optical processing communities This book covers the fundamental basis of the optical and image processing techniques by integrating contributions from both optical and digital research communities to solve current application bottlenecks and give rise to new applications and solutions Besides focusing on joint research it also aims at disseminating the knowledge existing in both domains Applications covered include image restoration medical imaging surveillance holography etc a very good book that deserves to be on the bookshelf of a serious student or scientist working in these areas Source Optics and Photonics News

Mirror Neuron Systems Jaime A. Pineda, 2009-03-01 The aim of this book is to bring together social scientists cognitive scientists psychologists neuroscientists neuropsychologists and others to promote a dialogue about the variety of processes involved in social cognition as well as the relevance of mirroring neural systems to those processes Social cognition is a broad discipline that encompasses many issues not yet adequately addressed by neurobiologists Yet it is a strong belief that framing these issues in terms of the neural basis of social cognition especially within an evolutionary perspective can be a very fruitful strategy This book includes some of the leading thinkers in the nascent field of mirroring processes and reflects the authors attempts to till common ground from a variety of perspectives The book raises contrary views and addresses some of the most vexing yet core questions in the field providing the basis for extended discussion among interested readers and laying down guidelines for future research It has been argued that interaction with members of one's own social group enhances cognitive development in primates and especially humans Barrett Henzi 2005 Byrne and Whiten 1988 Donald 1991 and others have speculated that abilities such as cooperation deception and imitation led to increasingly complex social

interactions among primates resulting in a tremendous expansion of the cerebral cortex The evolutionary significance of an imitation capability in primates is matched by its ontological consequences
