

# Radiography Positioning Guide

Brought to you by IDEXX Diagnostic Imaging and IDEXX Telemedicine Consultants

## Tips

- Take at least two views of each anatomic region—remember, you're capturing a three-dimensional object.
- Center the x-ray beam directly over the area of interest.
- Visualize how the image would look on a monitor. Move the patient and position the area of interest along the long axis of your collimated field, rather than rotating the extremity.

- Collimate to the area of interest to reduce scatter radiation and improve image quality.
- Be safe—always use protective lead gloves, aprons, and thyroid shields to protect yourself from scatter radiation, stay as far away as possible from the primary x-ray beam, and use positioning devices.
- Use a well-defined system of exposure determination, such as a technique chart based on published exposure values, for accurate, repeatable, and optimal exposures. Include laterality markers.

## Thorax

### Lateral thorax

Position animal in lateral recumbency. Rotate thorax dorsally. Extend head limbs, but do not rotate patient. Collimate collimator centrally to top of last rib. Place extremity of paw over chest.

## Abdomen

### Lateral abdomen

Position animal as for lateral thorax, but center on middle of last rib. Exception: For cats and brachycephals, last 2 ribs past last rib.

## Key

- Anesthesia required
- Anesthesia or heavy sedation suggested

## Skull

### Lateral skull

### Dorsocentral skull

### Buccal, open mouth

### Temporomandibular oblique

**Ventrodorsal maxilla, open mouth**   
Skull is opened, with horizontal maxilla table surface. Put mandible caudally and center it. Secure anteroposterior tubes anteriorly in center of maxilla or just the tube and support caudally. In one side of the maxilla. Angle x-ray beam 30° from perpendicular (if possible).

**Frontal sinus view**   
Position mandible perpendicular to table surface with maxilla pointing straight up.

**Buccal/other oblique**   
Rotate the mandible up or down depending on the area of interest. The larger image depicts positioning for buccal and maxilla. The smaller image indicates positioning for frontal bone and maxilla.

## Spine

### Lateral cervical spine

### Lateral thoracic spine

### Ventrodorsal cervical spine

### Lateral lumbar spine

## Shoulder and front limbs

**Lateral shoulder**   
Limb to be imaged must be down and extremity straight and vertical. Put supporting limb caudally and ventrally just over the back.

**Lateral elbow**

**Lateral carpus**

**Craniocaudal elbow**

**Dorsopalmar carpus**

**Caudocranial shoulder**

## Pelvis and hind limbs

### Ventrodorsal pelvis

### Lateral stifle

### Lateral tarsus

### Caudocranial stifle

### Oblique lateral digits

# Positioning In Radiography

**F Rizvi**

A decorative graphic element consisting of a light blue horizontal bar with a rounded right end, and a red circular glow behind it.

## **Positioning In Radiography:**
