## **Possible Tomorrows:**

**The Nature of Tomorrow** Michael Rawson, 2021-11-16 An examination of how Western visions of endless future growth have contributed to the global environmental crisis For centuries the West has produced stories about the future in which humans use advanced science and technology to transform the earth Michael Rawson uses a wide range of works that include Francis Bacon's *New Atlantis* the science fiction novels of Jules Verne and even the speculations of think tanks like the RAND Corporation to reveal the environmental paradox at the heart of these narratives the single minded expectation of unlimited growth on a finite planet Rawson shows how these stories which have long pervaded Western dreams about the future have helped to enable an unprecedentedly abundant and technology driven lifestyle for some while bringing the threat of environmental disaster to all Adapting to ecological realities he argues hinges on the ability to create new visions of tomorrow that decouple growth from the idea of progress

Jonathon Anderson, Lois Weinthal, 2021-11-04 *Digital Fabrication in Interior Design* Body Object Enclosure draws together emerging topics of making that span primary forms of craftsmanship to digital fabrication in order to theoretically and practically analyze the innovative and interdisciplinary relationship between digital fabrication technology and interior design. The history of making in interior design is aligned with traditional crafts but a parallel discourse with digital fabrication has yet to be made evident. This book repositions the praxis of experimental prototyping and integrated technology to show how the use of digital fabrication is inherent to the interior scales of body objects and enclosure. These three scales act as a central theme to frame contributions that reinforce the interdisciplinary nature of interior design and reinterpret traditional crafts by integrating new methods of making into conventional workflows. Featuring significant international practitioners and researchers, the selected contributions represent the ever-increasing interdisciplinary nature of design, demonstrating a breadth of disciplines. A foundational text for interiors students and practitioners, *Digital Fabrication in Interior Design* expands the necessary dialogue about digital fabrication at the scale of interiors to inform design theory and practice.

*Directors' Decisions and the Law* Alice Belcher, 2014-02-24 Directors are key decision makers in any organisation, whether it is in the public sector, a family business, or a transnational company. The UK Companies Act 2006 codified directors' duties for the first time and describes the director as the most likely to promote the success of the company for the benefit of its members as a whole. This book addresses key tensions and problems involved in the duties and responsibilities of the director in promoting success, including corporate culture and credibility, trust, risk, and uncertainty, collective responsibility, and the degree of control. The book considers directors' decision making in both private and public sector organisations and explicitly examines aspects of decision making during periods of financial distress. The book compares the legal contexts of directors' decisions in the UK to those of the USA, Germany, and Australia and takes an interdisciplinary approach in its combination of management theory, economic theory, and behavioural studies. In doing so, the book addresses issues key to the understanding of corporate governance in light of recent financial crises.
