Recursive Neural Networks For Associative Memory:

Recursive Neural Networks for Associative Memory Yves Kamp, Martin Hasler, 1990-12-28 A discussion of the different problems which arise in the analysis and design of discrete time and discrete valued recursive networks It is the aim of this book to present a structured introduction to these networks which in spite of their simple architecture exhibit complex behaviours

Associative Memory in a Recurrent Neural Network, 2001 This work is part of a project with the long term goal of demonstrating self organized goal driven adaptive learning in a simulated mobile vehicle with multiple sensors The research focusses on recurrent neural networks RNN since they appear to have the potential to generate some of the characteristics believed to be required for the creation of intelligent behaviour in a machine The report first provides details of the RNN structure and learning rules the latter involving both Hebbian D O Hebb 1949 and feedback learning Results are presented for trials using ten sensor images as a training set for the RNN The main questions investigated are can a pattern and can an identification be recovered from the code memory array by the single presentation of a pattern in the image sensor stream The findings show the relationship between RNN memory capacity and the number of training patterns

Proceedings of the ... Midwest Symposium on Circuits and Systems, 2002 Neural Nets and Chaotic Carriers Peter Whittle, 1998-12-08 Neural Nets and Chaotic Carriers is an innovatory text in that it develops rational principles for the design of associative memories with a view to applying these principles to models with the irregularly oscillatory operation so evident in biological neural systems. It thus bridges studies of artificial and of biological neural networks with new results for both. The text has a strong research character but a concise exposition from the basics makes it accessible to non specialists. Design is based on the criterion that an associative memory must be able to cope with fading data i.e. to form an inference from data even as its memory of that data degrades. The resultant net shows striking biological parallels suggesting testable anatomical predictions. Many questions concerning composite or spurious traces and memory capacity are clarified. The approach taken to models of the biological neuron and oscillation in systems of such neurons follows the pioneering ideas of W J Freeman and develops these. In particular when the associative memory principles are combined with oscillatory operation some remarkable effects emerge. For example the system shows a low frequency square wave oscillation the escapement oscillation with gamma range bursts at its peaks much as is observed in electroencephalograms. The text will be invaluable for researchers and graduate workers with a primary interest in artificial or biological neural nets. However it is also accessible and interesting to anyone with the mathematical background usual in artificial intelligence computer science systems studies or statistics for example.

Parallel Algorithms for Digital Image Processing, Computer Vision and Neural Networks Ioannis Pitas, 1993-04-09 World renowned contributors present papers concerning algorithms used on the latest generation of parallel machines MIMD. Details key applications running the gamut from medical imaging visualization and remote sensing to HDTV demonstrating the large computational complexity necessary to perform these tasks.

Neural Network Models Philippe De Wilde, 1996 Providing an in depth treatment of the main topics in neural networks this volume concentrates on multilayer networks and completely connected networks as well as discussing both analog and digital networks. The central themes are dynamical behaviour attractors and capacity Boltzmann machines are also discussed. The subject is developed from scratch and does not use statistical physics. Because the volume adopts a pedagogical approach explaining all steps in full the style which the book takes it will appeal to engineers computer scientists and applied
