Pattern Classifiers And Trainable Machines:

Pattern Classifiers and Trainable Machines J. Sklansky, G.N. Wassel, 2012-12-06 This book is the outgrowth of both a research program and a graduate course at the University of California Irvine UCI since 1966 as well as a graduate course at the California State Polytechnic University Pomona Cal Poly Pomona The research program part of the UCI Pattern Recognition Project was concerned with the design of trainable classifiers the graduate courses were broader in scope including subjects such as feature selection cluster analysis choice of data set and estimates of probability densities In the interest of minimizing overlap with other books on pattern recognition or classifier theory we have selected a few topics of special interest for this book and treated them in some depth Some of this material has not been previously published The book is intended for use as a guide to the designer of pattern classifiers or as a text in a graduate course in an engineering or computer science curriculum Although this book is directed primarily to engineers and computer scientists it may also be of interest to psychologists biologists medical scientists and social scientists [Pattern Classifiers and Trainable Machines](#) J. Annadurai, 2007 **Fuzzy Sets & their Application to Clustering & Training** Beatrice Lazzerini, Lakhmi C. Jain, D. Dumitrescu, 2000-03-24 Fuzzy set theory and its underlying fuzzy logic represents one of the most significant scientific and cultural paradigms to emerge in the last half century Its theoretical and technological promise is vast and we are only beginning to experience its potential Clustering is the first and most basic application of fuzzy set theory but forms the basis of many more sophisticated intelligent computational models particularly in pattern recognition data mining adaptive and hierarchical clustering and classifier design Fuzzy Sets and their Application to Clustering and Training offers a comprehensive introduction to fuzzy set theory focusing on the concepts and results needed for training and clustering applications It provides a unified mathematical framework for fuzzy classification and clustering a methodology for developing training and classification methods and a general method for obtaining a variety of fuzzy clustering algorithms The authors top experts from around the world combine their talents to lay a solid foundation for applications of this powerful tool from the basic concepts and mathematics through the study of various algorithms to validity functionals and hierarchical clustering The result is Fuzzy Sets and their Application to Clustering and Training an outstanding initiation into the world of fuzzy learning classifiers and fuzzy clustering [Data Mining With Decision Trees: Theory And Applications \(2nd Edition\)](#) Oded Z Maimon, Lior Rokach, 2014-09-03 Decision trees have become one of the most powerful and popular approaches in knowledge discovery and data mining it is the science of exploring large and complex bodies of data in order to discover useful patterns Decision tree learning continues to evolve over time Existing methods are constantly being improved and new methods introduced This 2nd Edition is dedicated entirely to the field of decision trees in data mining to cover all aspects of this important technique as well as improved or new methods and techniques developed

after the publication of our first edition In this new edition all chapters have been revised and new topics brought in New topics include Cost Sensitive Active Learning Learning with Uncertain and Imbalanced Data Using Decision Trees beyond Classification Tasks Privacy Preserving Decision Tree Learning Lessons Learned from Comparative Studies and Learning Decision Trees for Big Data A walk through guide to existing open source data mining software is also included in this edition This book invites readers to explore the many benefits in data mining that decision trees offer

Image Processing, Analysis and Machine Vision Milan Sonka, Vaclav Hlavac, Roger Boyle, 2013-11-11 Image Processing Analysis and Machine Vision represent an exciting part of modern cognitive and computer science Following an explosion of interest during the Seventies the Eighties were characterized by the maturing of the field and the significant growth of active applications Remote Sensing Technical Diagnostics Autonomous Vehicle Guidance and Medical Imaging are the most rapidly developing areas This progress can be seen in an increasing number of software and hardware products on the market as well as in a number of digital image processing and machine vision courses offered at universities world wide There are many texts available in the areas we cover most indeed all of which we know are referenced somewhere in this book The subject suffers however from a shortage of texts at the elementary level that appropriate for undergraduates beginning or completing their studies of the topic or for Master s students and the very rapid developments that have taken and are still taking place which quickly age some of the very good text books produced over the last decade or so This book

reflects the authors experience in teaching one and two semester undergraduate and graduate courses in Digital Image Processing Digital Image Analysis Machine Vision Pattern Recognition and Intelligent Robotics at their respective institutions

Pattern Recognition and Image Processing in Physics, Robin Antony Vaughan,1991 The Scottish Universities Summer School in Physics has been held every year since 1960 The purpose of the school is to contribute to the dissemination of advanced knowledge and the formation of contacts among scientists from different countries The lecturers at the school are all international experts in their subject Their brief is to present an up to date survey of current research in their own field in the form of a coherent series of lectures at a level suitable for students who are normally in their second or third postgraduate year With more and more sophisticated computers and computer software proving itself invaluable with its advanced pattern recognition capabilities in such areas as defence and environmental and industrial control this edited volume discusses various systems that have emerged in recent years and their potential and actual applications Necessary computer architecture and software tools are explained Image processing and analysis are discussed paying particular attention to shape and motion analysis and image enhancement Neural networks play a vital role and are discussed in some detail Specific applications of this technology are concentrated on in the final section of this work notably earth observations and geological study
