studies and PET scans Principles of Neural Science Sixth Edition benefits from a cohesive organization beginning with an insightful overview of the interrelationships between the brain nervous system genes and behavior The text is divided into nine sections Part I Overall Perspective provides an overview of the broad themes of neural science including the basic anatomical organization of the nervous system and the genetic bases of nervous system function and behavior Part II Cell and Molecular Biology of Cells of the Nervous System examines the basic properties of nerve cells including the generation and conduction of propagated signaling Part III Synaptic Transmission focuses on the electrophysiological and molecular mechanism of synaptic transmission with chapters on neuronal excitability neurotransmitters and transmitter release Part IV Perception discusses the various aspects of sensory perception including how information from the primary organs of sensation is transmitted to and processed by the central nervous system Part V Movement considers the neural mechanisms underlying movement and examines a new treatment that addresses how the basal ganglia regulate the selection of motor actions and instantiate reinforcement learning Part VI The Biology of Emotion Motivation and Homeostasis examines the neural mechanisms by which subcortical areas mediate homeostatic control mechanisms emotions and motivation Part VII Development and the Emergence of Behavior looks at the nervous system from early embryonic differentiation to the formation and elimination of synapses Part VIII Learning Memory Language and Cognition expands on the previous section examining the cellular mechanisms of implicit and explicit memory storage as well as decision making and consciousness Part IX explores the neural mechanisms underlying diseases and disorders of the nervous system including autism spectrum disorder epilepsy schizophrenia and anxiety   *The Neuroscience of Language* Friedemann Pulvermüller,2002 How is language organized in the human brain The Neuroscience of Language published in 2003 puts forth a systematic model of language to bridge the gap between linguistics and neuroscience Neuronal models of word and serial order processing are presented in the form of a computational connectionist neural network The linguistic emphasis is on words and elementary syntactic rules Introductory chapters focus on neuronal structure and function cognitive brain processes the basics of classical aphasia research and modern neuroimaging of language neural network approaches to language and the basics of syntactic theories The essence of the work is contained in chapters on neural algorithms and networks basic syntax serial order mechanisms and neuronal grammar Throughout excursuses illustrate the functioning of brain models of language some of which are accessible as animations on the book s accompanying web site It will appeal to graduate students and researchers in neuroscience psychology linguistics and computational modeling   *Handbook of Neuropsychology* F. Boller,François Boller,1988 In recent years there has been an enormous increase in interest into disorders of higher cortical functions and into brain behavior relationships The Handbook of Neuropsychology has been planned as a reference source that will provide for the first time comprehensive and current coverage of both experimental and clinical aspects of neuropsychology The chapter authors have produced in depth reviews that go beyond a summary of their results and points

of view Each chapter is up to date covering the latest developments in methodology and theory Discussion of bedside evaluations laboratory techniques as well as theoretical models are all to be found in the Handbook In addition the editors have attempted to make the Handbook as coherent as possible by encouraging minimal overlap in topic matter The first section introduces historical developments in neuropsychology approaches to the clinical and experimental assessment of higher cortical functions as well as statistical and methodological issues In addition the introduction covers cerebral dominance and specialization as well as models of cognition Section 2 Topic Editor Professor G Rizzolatti deals with normal and disordered attentional processes in experimental animals and in humans Section 3 Topic Editor Professor H Goodglass encompasses language aphasia and related disorders it is shared over Volumes 1 and 2 This section emphasizes both the classical syndromes of aphasic disorders as well as the contribution of modern neurolinguistics Special issues include bilingual and polyglot aphasia disorders of sign language aphasia in left handers as well as recovery and therapy of aphasia This section concludes with chapters on disorders of gestural behavior and apraxia
