Neuronal Recognition

Victor M. Corman

Neuronal Recognition:

Neuronal Recognition Samuel Barondes, 2013-11-11 An outstanding characteristic of the nervous system is that neurons make selective functional contacts Each neuron behaves as if it recognizes the neurons with which it associates and rejects associations with others The specific interneuronal relationships that result define the innate neuronal circuits that determine the functioning of this system The purpose of this volume is to present some approaches to the problem of neuronal recognition The volume has been somewhat arbitrarily divided into three sections In the first section the overriding theme is the degree of specificity of neuronal recognition How specific is specific Is the specificity so precise that the neurites of one neuron will only make synaptic contact with a unique target neuron If less precise within what range Are the rules for specification that are operative in the embryo still operative at the same level of precision when connections regenerate in the mature organism Are they still operative in dissociated tissue grown in culture The second section of this volume contains reviews of morphological studies of synaptogenesis and biochemical studies of synaptic components Can the morphology of developing cellular contacts provide clues about selectivity Can the chemical components of synaptic junctions be isolated and characterized Do they include resolvable components that mediate neuronal recognition The third section contains studies seeking to identify the existence of specific molecules that might mediate cellular recognition A major question here is whether molecules of this type even exist

Neuronal Information Transfer Arthur Karlin, 2012-12-02 Neuronal Information Transfer contains the proceedings of the symposium on Neuronal Information Transfer held in Columbia University in June 1977 The symposium focuses on the molecular ultrastructural and morphological study of a number of systems showing defined receptor effector interactions The collection of papers presented in the symposium provides insights into the understanding of nervous information transfer The book includes findings and studies on the biogenic amine systems cholinergic system amino acid systems and brain peptides and opiate system Treatises that covered cyclic nucleotides and the neuronal structure and development are also presented Neuroscientists neurologists researchers educators and students in neuroscience will benefit from this book Neural Network Models of Cognition J.W. Donahoe, V.P. Dorsel, 1997-09-26 This internationally authored volume presents major findings concepts and methods of behavioral neuroscience coordinated with their simulation via neural networks A central theme is that biobehaviorally constrained simulations provide a rigorous means to explore the implications of relatively simple processes for the understanding of cognition complex behavior Neural networks are held to serve the same function for behavioral neuroscience as population genetics for evolutionary science The volume is divided into six sections each of which includes both experimental and simulation research 1 neurodevelopment and genetic algorithms 2 synaptic plasticity LTP 3 sensory hippocampal systems 4 motor systems 5 plasticity in large neural systems reinforcement learning and 6 neural imaging and language The volume also includes an integrated reference section and a comprehensive index Principles of

Brain Dynamics Mikhail I. Rabinovich, Karl J. Friston, Pablo Varona, 2023-12-05 Experimental and theoretical approaches to global brain dynamics that draw on the latest research in the field The consideration of time or dynamics is fundamental for all aspects of mental activity perception cognition and emotion because the main feature of brain activity is the continuous change of the underlying brain states even in a constant environment The application of nonlinear dynamics to the study of brain activity began to flourish in the 1990s when combined with empirical observations from modern morphological and physiological observations This book offers perspectives on brain dynamics that draw on the latest advances in research in the field It includes contributions from both theoreticians and experimentalists offering an eclectic treatment of fundamental issues Topics addressed range from experimental and computational approaches to transient brain dynamics to the free energy principle as a global brain theory The book concludes with a short but rigorous guide to modern nonlinear dynamics and their application to neural dynamics

The Handbook of Brain Theory and Neural Networks Michael A. Arbib, 2003 This second edition presents the enormous progress made in recent years in the many subfields related to the two great questions how does the brain work and How can we build intelligent machines This second edition greatly increases the coverage of models of fundamental neurobiology cognitive neuroscience and neural network approaches to language Midwest

The Retina A Model for Cell Biology Studies Part_1 Ruben Adler, 2012-12-02 The Retina A Model for Cell Biology Studies Part I is the first of a two part series that details developments in the study of retinal cell biology The book begins with some basic information about retinal structure and development followed by a discussion of the advantages of the retina as a model system for cell biology studies It reviews some of the major events in the maturation of the retina pertinent to the assembly of neuronal circuits The book describes studies of neuronal assembly in order to demonstrate that adhesion based neuronal assembly may be the most elaborated example of a wider class of morphogenetic phenomena categorized as adhesion guided multicellular assembly systems The remaining chapters discuss in vivo and in vitro studies on trophic interactions in retinal development and in retinal degenerations cell motility in the retina molecular properties of vertebrate rod cells the role of cyclic nucleotides in the metabolism and function of the retina and the cellular and molecular aspects of photosensitive membrane turnover
