The Art of Sacrifice in Chess Rudolf

Spielmann,2012-03-08 The beauty of a game of chess is usually appraised and with good reason according to the sacrifices it contains On principle we incline to rate a sacrificial game more highly than a positional game Instinctively we place the moral value above the scientific We honor Capablanca but our hearts beat higher when Morphy's name is mentioned Introduction Perhaps the strongest Austrian born grandmaster of the 20th century Rudolf Spielmann 1883-1942 defeated such world class opponents as Nimzovich Tartakower Bogoljubov and even the great Capablanca Among the reasons for his success was his mastery of the art of sacrifice In this ground breaking classic distilled from 40 years of tournament play he outlines the hard won lessons that enable a player to win games by giving up pieces Drawing on dozens of his own games against such topflight players as Schlechter Tartakower Bogoljubov Reti Rubinstein and Tarrasch Spielmann describes and analysis various type of sacrifices positional for gain mating and real sacrifices for development obstructive preventive line clearance vacating deflecting and more The result was the first systematic attempt to explain and exploit the theory of chess sacrifice it remains an extremely helpful and useful weapon in the arsenal of chess players at every level **Positional**

Thematic Chess Training Antonio Gude, 2023-10-12 THEMATIC CHESS TRAINING BOOK 8 POSITIONAL SACRIFICES Unlike tactical sacrifices so called positional sacrifices are an investment of material that usually doesn't bring immediate benefits but translates into certain positional advantages whose fruits the player will reap in the medium or long term and which are based more on positional factors than on a combinatorial sequence These factors can be enabling a square as a strong point displacing the opponent's pawn structure or creating some kind of weakness in the enemy position The student should bear in mind that when solving the exercises they are not asked to decipher all the moves in the game or position which are sometimes included until the end for documentation purposes but only those that say lead to an advantage for one side or to equality when it comes to saving an inferior position There are exceptions and here the guidance of an

instructor or the student's own common sense is important because if the first move or two produce such a judgment the solver can be expected to come up with additional concrete lines that enrich the solution. Chess is not a mathematical science and allows for a variety of interpretations. Only one formula is known for progressing in chess play as many games as possible together with theoretical study and analysis of the games themselves. The ideal complement to this formula is as many great masters recommend for the player to develop and perfect their tactical and strategic skills by solving numerous exercises specially selected for their usefulness.
