

Guide to Prospectuses and Other Technical Writing

Dean Wheeler
May 2019

This brief guide is provided to aid students in writing the M.S. or Ph.D. prospectus required by the BYU Chemical Engineering Department. In addition, I give writing principles which apply to writing scientific papers, technical reports, and the thesis or dissertation.

1 Objectives and Audience

For any kind of writing you should understand the objectives of the document and tailor your material for the intended audience. The objectives for almost all technical writing are to

- Sell your ideas. This means you should convince the intended audience that your experiments and theories are important, interesting, valid, and useful.
- Disseminate scientific knowledge. This means you should accurately and concisely document your experimental procedures, mathematical model, and numerical results for others to use and verify.

The prospectus is a *research proposal*. It is written to gain approval to carry out the project. In defining the scope of your project, the approved prospectus becomes a kind of contract between you and your committee so that you know when you are done. It is recognized that you may change directions along the way, but with the prospectus in hand you have a place to start and an idea where to stop.

Because the prospectus is written before most of the research work is done, the emphasis is on the first item above ("Sell your ideas"). You must convince your graduate committee that

- Your project addresses an important problem in an appropriate way.
- You have adequate preparation and a plan to solve the problem in a reasonable amount of time.

The audience is your graduate committee, a small group of professors. They will understand general scientific and engineering concepts like process optimization, phase equilibria, kinetic vs. transport limitations, validation of numerical models, experimental design, and data analysis. Not all committee members are experts in your particular subfield, and so will need to be given the appropriate background material to understand the terminology and theory specific to your project. They need to be told what is "common knowledge" in your subfield and what is new and innovative about your work.
