Microcirculation, 1977 **Advances in Microcirculation** Harald Harders, 1968 *The Physiology and Pharmacology of the Microcirculation* Nicholas Mortillaro, 2012-12-02 The Physiology and Pharmacology of the Microcirculation Volume 1 discusses the biochemistry metabolism pharmacology and physiology of the general microcirculation This volume is organized into nine chapters that explore the microcirculation in several organ systems such as brain eye heart and kidney The introductory chapters treat the biochemistry of isolated elements of the microvasculature with special emphasis on the central nervous system These chapters also explore the microvascular element and the vascular smooth muscle focusing on their ultrastructural characteristics innervation and contraction relaxation and the effects of both endogenous and pharmacological vasoactive substances on vascular smooth muscle The subsequent chapters deal with the exchange mode of the microcirculation the mechanisms involved in the regulation of transcapillary fluid exchange and the permeability of capillaries to small and large molecules in a variety of tissues A discussion on the control mechanisms modulating microcirculatory dynamics is also included The remaining four chapters are organized to deal with the microcirculation process in selected organs *Progress in Microcirculation Research* D. Garibaldi, MD, 2024-08-12 The presently accepted model of the circulation is based on the work of Dr William Harvey in the 17th century But what Dr Harvey described was what we now call the Macrocirculation this is the heart lungs arteries and veins The technology at the time did not permit a study of the capillaries the interstitial fluid and the lymphatic system How did oxygen and other molecules traveled from the capillary lumen to the parenchymal cells was not known A lot of scientific knowledge has been acquired since Dr Harvey s description Dr Marcello Malpighi and Italian physician and biologist visualized and discovered the capillaries also in the 17th Century Claude Bernard a French physiologist introduced the concept of the internal environment in the 19th Century and physiologist Adolf Fick first reported a law governing mass transport through diffusive means in 1855 There was knowledge about the Lymphatic System for many years but only recently we have come to understand that it is a part of the microcirculation and the main avenue to drain cellular waste products from the cells to the circulation and out to the external environment We can now clearly divide the circulation into a macrocirculation and a microcirculation The former comprises the heart lungs arteries and veins and has been described in detail in many volumes The purpose of this book is to describe the microcirculation composed of capillaries venules the interstitial space the internal environment and the lymphatic system And to describe how important molecules travel from the capillary lumen to the interstitial space to the parenchymal cells to the lymphatic system and to the macrocirculation to finally be expelled in a modified form into the external environment which is the world we live in
