Robust Control Jürgen Ackermann, 2012-12-06 Many plants have large variations in operating conditions To ensure smooth running it is essential to find a simple fixed gain controller that guarantees rapidly decaying and well damped transients for all admissible operating conditions Robust Control presents design tools developed by the authors for the solution of this design problem Examples of simple and complex cases such as a crane a flight control problem and the automatic and active four wheel steering of a car illustrate the use of these tools This book is intended for anyone who has taken an undergraduate course in feedback control systems and who seeks an advanced treatment of robust control with applications Drawing on the resources and authoritative research of a leading aerospace institute it will mainly be of interest to mechanical and electrical engineers in universities institutes and industrial research centres

Adolfsson, J. Karlsén, 1998-08-28 Mechatronics a synergistic combination of mechanical electronic and computing engineering technologies is a truly multidisciplinary approach to engineering New products based on mechatronic principles are demonstrating reduced mechanical complexity increased performance and often previously impossible capabilities This book contains the papers presented at the UK Mechatronics Forum s 6th International Conference held in Skövde Sweden in September 1998 Many of

these high quality papers illustrate the tremendous influence of mechatronics on such areas as manufacturing machinery automotive engineering textiles manufacture robotics and real time control and vision systems There are also papers describing developments in sensors actuators control and data processing techniques such as fuzzy logic and neural networks all of which have practical application to mechatronic systems **Applied Mechanics Reviews** ,1995 *Robust Control* Jürgen Ackermann,1993 **Robust Control Design 2000 (ROCOND 2000)** Vladimír Kučera,Michael Šebek,2000 This Proceedings contains the papers presented at the IFAC Symposium on Robust Control Design held in Prague on 21-23 June 2000 The technical program included 21 sessions on robust control and related topics in identification and signal processing The methods presented in these sessions included linear matrix inequalities polynomial techniques sliding modes optimal control fuzzy and adaptive control Attention was also paid to linear as well as nonlinear systems The highlights of the technical program were two plenary lectures by J Geromel Universidade Estadual de Campinas Brazil and H Kwakernaak University of Twente The Netherlands **Proceedings, IEEE Control Systems Society ...
