Abstract: It is shown that nonlinear electrodynamics of the Born–Infeld theory type may be exploited to shed insight into a few fundamental problems in theoretical physics, including rendering electromagnetic asymmetry to energetically exclude magnetic monopoles, achieving finite electromagnetic energy to relegate curvature singularities of charged black holes, and providing theoretical interpretation of equations of state of cosmic fluids via k-essence cosmology. Also discussed are some nonlinear differential equation problems.

Keywords: Born–Infeld electrodynamics; black holes; curvature singularities; k-essence cosmology; equation of state; early universe

1 Introduction

Fundamental physics thrives and even relies on nonlinearities which often lead to highly challenging nonlinear differential equation problems. For example, the free motion of a particle of mass m and velocity v is governed in Newtonian mechanics by the Lagrangian action function $\frac{1}{2}mv^2$ but that in Einstein's special relativity is by $mc^2(1 - \sqrt{1 - v^2/c^2})$ where c is the speed of light in vacuum; in order to obtain a full description of the quantum-mechanical motion of a charged particle, the conventional partial derivative ∂_μ with respect to the Minkowski spacetime coordinate x_μ in the Schrödinger equation needs to be replaced by the gauge-covariant derivative $D_\mu = \partial_\mu - iA_\mu$, where A_μ is a real-valued gauge field with induced electromagnetic field $F_{\mu\nu} = \partial_\mu A_\nu - \partial_\nu A_\mu$, giving rise to nonlinear interaction between the wave function and gauge field in the coupled theory; the Yang–Mills gauge field theory describing weak and strong interactions between subatomic particles is formulated in terms of matrix-valued field tensors of the form $F_{\mu\nu} = \partial_\mu A_\nu - \partial_\nu A_\mu + [A_\mu, A_\nu]$, where A_μ is a matrix-valued gauge field and $[\cdot, \cdot]$ the matrix commutator, introducing nonlinear self-interaction of the gauge field; the gravitational theory of Einstein is built over a pseudo-Riemannian or Lorentzian manifold that relates the spacetime metric tensor to the matter presence through coupling its Ricci tensor and curvature scalar to the matter stress tensor, which inevitably gives rise to a highly nonlinear partial differential equation problem. Interestingly, in many situations, even when the original theoretical setups are linear and successful, it
