Nonlinear Hyperbolic Problems:

Nonlinear Hyperbolic Problems Claude Carasso, Pierre-Arnaud Raviart, Denis Serre, 2006-11-15 The field of nonlinear hyperbolic problems has been expanding very fast over the past few years and has applications actual and potential in aerodynamics multifluid flows combustion detonics amongst other The difficulties that arise in application are of theoretical as well as numerical nature In fact the papers in this volume of proceedings deal to a greater extent with theoretical problems emerging in the resolution of nonlinear hyperbolic systems than with numerical methods The volume provides an excellent up to date review of the current research trends in this area *Propagation and Interaction of Singularities in Nonlinear Hyperbolic Problems* Michael Beals, 2012-12-06 This book developed from a series of lectures I gave at the Symposium on Nonlinear Microlocal Analysis held at Nanjing University in October 1988 Its purpose is to give an overview of the use of microlocal analysis and commutators in the study of solutions to nonlinear wave equations The weak singularities in the solutions to such equations behave up to a certain extent like those present in the linear case they propagate along the null bicharacteristics of the operator On the other hand examples exhibiting singularities not present in the linear case can also be constructed I have tried to present a crosssection of both the regularity results and the singular examples for problems on the interior of a domain and on domains with boundary The main emphasis is on the case of more than one space dimension since that case is treated in great detail in the paper of Rauch Reed 159 The results presented here have for the most part appeared elsewhere and are the work of many authors but a few new examples and proofs are given I have attempted to indicate the essential ideas behind the arguments so that only some of the results are proved in full detail It is hoped that the central notions of the more technical proofs appearing in research papers will be illuminated by these simpler cases

Nonlinear Hyperbolic Problems Claude Carasso, Pierre Charrier, Bernard Hanouzet, 2014-01-15 **Nonlinear Hyperbolic Problems** Claude Carasso, Pierre Charrier, Bernard Hanouzet, Jean-Luc Joly, 2006-11-14 The papers included in this proceedings volume are mostly original research papers dealing with life span of waves nonlinear interaction of waves and various applications to fluid mechanics **Nonlinear Hyperbolic Equations – Theory, Computation Methods, and Applications** Josef Ballmann, Rolf Jeltsch, 2013-03-08 On the occasion of the International Conference on Nonlinear Hyperbolic Problems held in St Etienne France 1986 it was decided to start a two years cycle of conferences on this very rapidly expanding branch of mathematics and its applications in Continuum Mechanics and Aerodynamics The second conference took place in Aachen FRG March 14 18 1988 The number of more than 200 participants from more than 20 countries all over the world and about 100 invited and contributed papers well balanced between theory numerical analysis and applications do not leave any doubt that it was the right decision to start this cycle of conferences of which the third will be organized in Sweden in 1990 This volume contains sixty eight original papers presented at the conference twenty two of them dealing with the mathematical theory e.g existence uniqueness stability behaviour of solutions physical modelling by

evolution equations Twenty two articles in numerical analysis are concerned with stability and convergence to the physically relevant solutions such as schemes especially devised for treating shocks contact discontinuities and artificial boundaries Twenty four papers contain multidimensional computational applications to nonlinear waves in solids flow through porous media and compressible fluid flow including shocks real gas effects multiphase phenomena chemical reactions etc The editors and organizers of the Second International Conference on Hyperbolic Problems would like to thank the Scientific Committee for the generous support of recommending invited lectures and selecting the contributed papers of the conference

Tomás Morales de Luna, Sebastiano Boscarino, Peter Frolkovič, Lucas O. Müller, Cipriano Escalante, 2026-01-12 This book presents a curated collection of recent research contributions in the field of nonlinear partial differential equations PDEs with an emphasis on hyperbolic problems These equations are essential for modeling complex physical phenomena such as wave propagation fluid dynamics blood flow and sediment transport In many real world applications the governing equations are not purely hyperbolic but involve intricate interactions with elliptic or parabolic components As the field advances through theoretical insights and practical needs this volume captures innovative developments shaping current research The contributions included here were originally presented at the 10th International Congress on Industrial and Applied Mathematics ICIAM held in Tokyo in 2023 They were selected from minisymposia on hyperbolic PDEs and related topics each organized by leading experts in the field The chapters in this book reflect a rich diversity of perspectives and approaches ranging from rigorous mathematical analysis to computational techniques and real world applications By bringing together these works the volume offers a comprehensive snapshot of the state of the art in hyperbolic PDE research highlighting both foundational insights and emerging trends Edited by the organizers of the relevant ICIAM 2023 minisymposia this book serves as a valuable resource for researchers practitioners and graduate students interested in the theoretical and applied aspects of nonlinear PDEs Whether you are exploring the mathematical underpinnings of wave phenomena or developing

models for complex systems in science and engineering this volume provides both inspiration and practical tools to advance your work **A Class of Nonlinear Hyperbolic Problems with Global Solutions** P. D. D'Ancona, Sergio Spagnolo, 1992

Hyperbolic Problems: Theory, Numerics And Applications (In 2 Volumes) Tatsien Li, Song Jiang, 2012-09-28 This two volume book is devoted to mathematical theory numerics and applications of hyperbolic problems Hyperbolic problems have not only a long history but also extremely rich physical background The development is highly stimulated by their applications to Physics Biology and Engineering Sciences in particular by the design of effective numerical algorithms Due to recent rapid development of computers more and more scientists use hyperbolic partial differential equations and related evolutionary equations as basic tools when proposing new mathematical models of various phenomena and related numerical algorithms This book contains 80 original research and review papers which are written by leading researchers and promising young scientists which cover a diverse range of multi disciplinary topics addressing theoretical modeling and computational issues arising under the umbrella of Hyperbolic Partial Differential Equations It is aimed at mathematicians researchers in applied sciences and graduate students **Workshop on nonlinear hyperbolic problems** Rolf

Leis, Reinhard Racke, Sonderforschungsbereich Nichtlineare Partielle Differentialgleichungen Bonn, Deutsche Forschungsgemeinschaft, 1990 **Lecture Notes on Numerical Methods for Hyperbolic Equations** Elena Vázquez-Cendón, 2011-05-23 This volume contains the lecture notes of the Short Course on Numerical Methods for Hyperbolic Equations Faculty of Mathematics University of Santiago de Compostela Spain 2 4 July 2011 The course was organized in recognition of Prof Eleuterio Toro s contribution to education and training on numerical methods for partial differential equations and was organized prior to the International Conference on Numerical Methods for Hyperbolic Equations Theory and Applications which honours Professor Toro in the month of his 65th birthday These lecture notes on selected topics in numerical methods for hyperbolic equations are from renowned academics in both theoretical and applied fields and include contributions on Nonlinear hyperbolic conservation laws First order schemes for the Euler equations High order accuracy monotonicity and non linear methods High order schemes for multidimensional hyperbolic problems A numerical method for the simulation of turbulent mixing and its basis in mathematical theory Lectures Notes on Numerical Methods for Hyperbolic Equations is intended primarily for research students and post doctoral research fellows Some background knowledge on the basics of the theoretical aspects of the partial differential equations their physical meaning and discretization methods is assumed **Multidimensional Hyperbolic Problems and Computations** James

implementing an exciting and stimulating year long program We especially thank the Work shop Organizers Andrew Majda and James Glimm for bringing together many of the major figures in a variety of research fields connected with multidimensional hyperbolic problems A vner Friedman Willard Miller PREFACE A primary goal of the IMA workshop on Multidimensional Hyperbolic Problems and Computations from April 3 14 1989 was to emphasize the interdisciplinary nature of contemporary research in this field involving the combination of ideas from the theory of nonlinear partial differential equations asymptotic methods numerical computation and experiments The twenty six papers in this volume span a wide cross section of this research including some papers on the kinetic theory of gases and vortex sheets for incompressible flow in addition to many papers on systems of hyperbolic conservation laws This volume includes several papers on asymptotic methods such as nonlinear geometric optics a number of articles applying numerical algorithms such as higher order Godunov methods and front tracking to physical problems along with comparison to experimental data and also several interesting papers on the rigorous mathematical theory of shock waves

Nonlinear Hyperbolic Problems Marco Cirinà, University of Wisconsin--Madison. Mathematics Research Center, WISCONSIN UNIV MADISON MATHEMATICS RESEARCH CENTER., 1969 The problems considered are the initial value and the mixed boundary problem for a system of quasi linear partial differential equations in two independent variables The main result is that under appropriate conditions the classical local solutions of these problems can be extended to sets of preassigned size Extensions of this type are useful in the control theory of hyperbolic equations Author

Hyperbolic Problems: Theory, Numerics, Applications Sylvie Benzoni-Gavage, Denis Serre, 2008-01-12 This volume contains papers that were presented at HYP2006 the eleventh international Conference on Hyperbolic Problems Theory Numerics and Applications This biennial series of conferences has become one of the most important international events in Applied Mathematics As computers became more and more powerful the interplay between theory modeling and numerical algorithms gained considerable impact and the scope of HYP conferences expanded accordingly
