Accelerated Learning: How You Can Identify Early Signs of Memory Loss and Then Repair Them Using Simple Techniques John Gamberini, 2018-07-17. If you're worried about your memory loss potentially leading to Alzheimer's or dementia, then this will be the most important message you ever read. Did you know memory loss can occur for up to 15 years before you notice any issues? But once the issues do appear, it's often too late because memory decline happens rapidly, often in a matter of months. In fact, the American Alzheimer's Association estimates that 1 in 9 Americans will suffer from Alzheimer's in their lifetime. And then there's dementia, which is set to increase 40% by 2025. Perhaps most worrying though, many doctors completely underestimate the effects, often writing off signs of memory damage as senior moments. Genetics play a part, yes, but according to a study at The University of Pittsburgh, up to 80% of our brain aging process is down to lifestyle. Now the good news is you probably don't have Alzheimer's. In fact, it's likely there is nothing wrong with you. But if you're over 40 and have experienced irritating memory lapses, there are ways to prevent and even reverse early stage memory loss. Ones which don't involve expensive drugs or new age treatments. And while other books only discuss adding coconut oil to your diet or doing sudoku daily, this simply isn't enough. You see, your brain is made up of several areas, and each one of these needs to be healed. If this all sounds complicated, don't worry, it's merely a case of making a few small, consistent changes to your daily routine. And no, this is not promotional material for some overpriced brain training program either. In this book, you will discover the hidden signs your memory is fading. What you should know before you take huge amounts of Vitamin E to improve your memory. How to use cooking to prevent memory loss. Fish oil is the best memory supplement, right? Wrong. A simple formula you can use to determine whether you're getting enough exercise. 3 intriguing scientific studies discover the truth of meditation and memory loss. How to deal with the legal implications of a loved one with dementia. The surprising brain dangers of multi-tasking. Questions to ask your attorney on your first meeting with them. The shocking secret behind certain antidepressants and memory loss. Proven medical reasons for your brain fog.
