

# Real Analysis

## Limits

Behavior of a function near a point or at infinity. Essential for defining calculus concepts.

## Continuity

A function has no abrupt breaks or jumps. Small changes in input lead to small changes in output.

## Sequences

An ordered list of numbers converging to a limit if its terms eventually get arbitrarily close to a specific value.

## Series

The infinite sum of a sequence's terms. Convergence means the sequence of partial sums has a finite limit.

## Metric Spaces

Generalizes distance. A set with a "metric" function defining the distance between any two points.

## Compactness

A property of "small" and "closed" sets. Every open cover has a finite subcover (Heine-Borel theorem).

## Uniform Convergence

A stronger form of convergence for function sequences. The "error" bound is independent of the input variable  $x$ .

## Measure Theory

Rigorous foundation for integration and probability. Assigns a "size" (measure) to sets, generalizing length, area, and volume.
